📘 Step-by-Step Guide: Creating and Managing Tasks

🎯 Process Overview

This guide explains how to create, update, and manage tasks using the Task Manager CLI.

✅ Prerequisites

- Python 3.11 installed
- Project cloned locally

🔢 Steps

1. Open Terminal

Navigate to project folder:

```
cd task-manager
```

---

2. Create a Task

```
python cli.py create "Buy groceries" --priority 2 --due "2026-03-30"
```

[Placeholder: Screenshot of terminal output]

---

3. List Tasks

```
python cli.py list
```

---

4. Update Task Status

```
python cli.py update-status 1 done
```

---

5. Add Tags

```
python cli.py add-tag 1 "shopping"
```

---

6. View Task Details

python cli.py show 1

⚠️ Common Mistakes

- Using wrong date format → must be YYYY-MM-DD
- Entering invalid task ID
- Using incorrect status values

🛠️ Troubleshooting

- If command fails → check Python version
- If task not updating → confirm task ID exists
- If nothing shows → run list to verify tasks exist

🎯 Outcome

You should now be able to:

- Create tasks
- Update them
- Manage tags and status
