❓ Task Manager FAQ

📌 Overview

This FAQ helps users understand and troubleshoot the Task Manager CLI application.

Target Audience: Beginner to intermediate developers

🚀 Getting Started

Q: How do I install the project?

A: Clone the repository and ensure Python 3.11+ is installed. No additional dependencies are required.

Q: How do I create a task?

A:

python cli.py create "Task Title"

⚙️ Features & Functionality

Q: How do I set priority?

A:

--priority 1 (Low)

--priority 2 (Medium)

--priority 3 (High)

--priority 4 (Urgent)

Q: How do I filter tasks?

A:

python cli.py list --status todo

python cli.py list --priority 3

Q: Where are tasks stored?

A: Tasks are stored in a local JSON file (tasks.json).

🛠️ Troubleshooting

Q: Why is my task not updating?

A: Ensure you are using the correct task ID.

Q: Why do I get a date error?

A: Use the correct format: YYYY-MM-DD.

Q: Why are no tasks showing?

A: You may not have created any tasks yet. Use the create command first.

🔍 Additional Questions

Q: Can I extend this project?

A: Yes, you can add features like exporting tasks, notifications, or a GUI.

Q: Is this production-ready?

A: No, it is primarily designed for learning and practice.

🧠 Known Issues

- No GUI (CLI only)
- Limited validation for user input
- No database support (uses JSON)
